

Student activity:

Globally there is an uneven distribution of resources. This can impact on the level of development of a country. Use your own knowledge to complete the table below.

- **Effect:** in this column describe the effects of having too much (high amounts) or too little (low amounts) of this resource.
- **Development:** in this column explain how having high or low amounts of this resource can impact on the level of development of a country.

Resource	Possible effects:	Impacts on development:
Food - your health is determined by the amount of food you eat and the nutritional value. The WHO suggests between 2000 and 2400 calories per day.	High -	High -
	Low -	Low -

How can access to resources impact development?

Water - is not only essential for people and animals to drink, but is also vital for crops and food supply.	High -	High -
	Low -	Low -
Energy - powers factories and machinery and provides fuel for transport and homes.	High -	High -
	Low -	Low -
